CHARGING SYSTEM

PRECAUTION

- 1. Check that the battery cables are connected to the correct terminals.
- 2. Disconnect the battery cables if a quick charge is given to the battery.
- 3. Do not perform tests with a high voltage insulation resistance tester.
- 4. Never disconnect the battery while the engine is running.
- 5. Check that the charging cable is tightly connected onto terminal B of the generator and the fuse box.
- 6. Do not check whether the generator generates current or not while terminal F is connected to the other terminals.
