DTC CHECK / CLEAR

NOTICE:
When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of any DTCs and freeze frame data.
HINT:
- DTCs which are stored in the ECM can be displayed on the intelligent tester. The intelligent tester can display current and pending DTCs.
- Some DTCs are not set if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.

1. CHECK DTC (Using intelligent tester)
    (a) Connect the intelligent tester to the DLC3.
    (b) Turn the ignition switch ON.
    (c) Turn the tester ON.
    (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES or PENDING CODES.
    (e) Check the DTC(s) and freeze frame data, and then write them down.
    (f) Check the details of the DTC(s) (see page).

2. CLEAR DTC (Using intelligent tester)
    (a) Connect the intelligent tester to the DLC3.
    (b) Turn the ignition switch ON.
    (c) Turn the tester ON.
    (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
    (e) Press the YES button.

3. CLEAR DTC (Without using intelligent tester)
    (a) Perform either of the following operations.
        (1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.
        (2) Remove the EFI and ETCS fuses from the engine room relay block (located inside the engine compartment) for more than 1 minute.

FREEZE FRAME DATA

1. DESCRIPTION

Freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, it can help determine if the vehicle was running or stopped, the engine was warmed up or not, the air-fuel ratio was Lean or Rich, and other data from the time the malfunction occurred.
HINT:

If it is impossible to duplicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, 5 separate sets of freeze frame data can be checked.

- 3 data sets before the DTC was set.
- 1 data set when the DTC was set.
- 1 data set after the DTC was set.

  These data sets can be used to simulate the condition of the vehicle around the time of the occurrence of the malfunction. The data may assist in identifying the cause of the malfunction, and in judging whether it was temporary or not.
